O Veloj spili

PODJEKIVANJE VELJE SPILE ZAPOČELO JE 1948 S GRIGOM NOVAKOM, A WERONI MUSLERA OČI SA BOLJIM ČEČUJ I KINO RADIJE

Opis i lokacija

Vela spila je najznačajnije arheološko spiljsko prapovijesno nalazište na Mediteranu. U njoj je moguće naprokinuta pratiti život čovjeka onomad 20000 godina.

Nalazi se na zapadnoj strani otoka Korčule u Veloj Luci na južnoj padini brežuljka Pinski rat.

Površina Vele spile je približno 1200 m², a u najvišoj tački visoka je 20 metara.

Na svodu spilje su dva otvora Vela Jankina i Vela Jdrilja.

Artefakti

U Veloj spili nađeni su mnogi artefakti koji pričaju priču o čovjeku koji je tu obitavao i prilagođavao se gromovnom klime i okolini, a dio artefakata je stalno izložen u Centru za kulturu Vela Luka.

Među njih artefakata su:

- figure životinja koje datiraju od prije 15000 godina i smatraja se najstarijim umjetničkim objektima u ovom dijelu svijeta.
- ljudski grobovi iz mezolitika koji su najstariji i jedini na ostrvu.

Čovjek u Veloj spili

Čovjek koji je obitavao u Veloj spili je Homo sapiens, identičan nama.

Ljudi su u paleolitik bili lovcu usavršeni a lovu na krajnje životinje (jelene, prapovijesna goveda i divlje magarce).

U mezolitik su pestali ribolovci, uz lov starije divljači (ječeve, sme, ptice) jer se promijenila klima i Korčula je postala otok pa je nestalo krupne divljači.

U mezolitiku pripitomijavali životinje i love se stočarivani.

TO CONCLUDE

- We have learned a lot while doing this project.
- We hope we have achieved our goal – to raise conscience of Vela Luka people about the significance of the Big Cave for Vela Luka and its tourism; and that we can be proud of it.
- We realized that there is a lot of work to be done with arranging the path leading to the Big Cave and the very locality before we can engage in more intense promotion of the Big Cave.
